Risk and reward profile

What does this synthetic indicator mean?

- The calculation of the risk indicator is based on historical data which may not be a reliable indication of the future risk profile of the sub-fund.
- The risk category shown is not guaranteed to remain unchanged. The sub-fund's risk indicator may shift over time.
- The lowest category of the risk indicator does not mean a risk-free investment.
- The sub-fund VALLBANC INVESTMENT FUND - Iberian Equities is classified in category 6 due to its investments in Iberian equities.
- Your initial investment does not benefit from any guarantee or protection.

The risk and reward indicator does not take into account the following:

- The value of debt securities may change significantly depending on economic and interest rate conditions as well as the credit worthiness of the issuer.

- The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions.
- The investment in underlying funds implies that the sub-fund is exposed to 1) the investment risks borne by the underlying funds, 2) the risk of increases in the level of charges borne by the underlying funds and 3) the risk that the underlying funds limit or suspend the right for their investors to redeem.
- Movements in currency exchange rates can adversely affect the return of your investment. The currency hedging used to minimize the effect of currency fluctuations may not always be successful.
- The sub-fund's exposure to a single country, which may be subject to particular political and economic risks, may cause the sub-fund to be more volatile than broadly diversified funds.
- Using derivatives can involve a higher level of risk. A small movement in the price of an underlying investment may result in a disproportionately large movement in the price of the derivative instrument.
- Failure or deficient processes, systems and controls, human error or catastrophic events may lead to important losses.
